

Group 1	<p>Student Report Generator</p> <p>Design a program with:</p> <ul style="list-style-type: none"> • A base class Person storing name and age. • A derived class Student adding marks. • A function template <code>findAverage<T>(T a, T b, T c)</code> to compute average marks. • Overloaded function <code>display()</code> to show either basic info or full details. • Handle invalid marks (negative or >100) using exceptions. • Store valid student records in a file named <code>report.txt</code>.
Group 2	<p>Employee Salary Calculator</p> <p>Create a program where:</p> <ul style="list-style-type: none"> • Base class Employee holds id and name. • Derived class Payroll adds basic, hra, da. • Overload a function calculate(): <ul style="list-style-type: none"> ◦ <code>calculate(int basic, int hra)</code> ◦ <code>calculate(double basic, double hra, double da)</code> • Use a template function <code>bonus<T>(T salary)</code> to add a 10% bonus. • Throw an exception if any salary component is negative. • Save final salaries to a file <code>salary_data.txt</code>.
Group 3	<p>Library Management System</p> <p>Implement:</p> <ul style="list-style-type: none"> • Base class Book (title, author), derived class EBook (file size). • Overload <code>showDetails()</code> to display summary vs. full info. • Template function <code>maxValue<T>(T a, T b)</code> to find the thicker or larger file. • Throw an exception if file size or page count ≤ 0. • Write and read all book info to/from library.txt.
Group 4	<p>Banking Transaction Logger</p> <p>Develop:</p> <ul style="list-style-type: none"> • Class Account with accNo, name, balance. • Derived class SavingsAccount with interestRate. • Overload <code>deposit()</code> for int and double amounts. • Template function <code>calculateInterest<T></code> to compute updated balance. • Raise an exception for deposit ≤ 0 or withdrawal $>$ balance. • Log every transaction to a file <code>transactions.txt</code>.
Group 5	<p>Product Inventory Manager</p> <p>Design:</p> <ul style="list-style-type: none"> • Base class Product with id, name, and price. • Derived class Electronic with warranty period. • Overloaded <code>update()</code>: <ul style="list-style-type: none"> ◦ <code>update(double newPrice)</code> ◦ <code>update(int newWarranty, double newPrice)</code> • Use a template <code>compare<T>(T a, T b)</code> to find the costlier product. • Throw exception if price < 0. • Save product data to and read from inventory.txt.
